CAUTION

To gain the best performance of the tool, prolong the duty life, make the Warranty valid if necessary, and to avoid hazards of fatal injuries please read and understand this Manual before using the tool.

Keep this manual for future references.

The illustrations in this manual are for reference only. They might be different from the real tool.

ESMA-4590N

Code	•	12872
Description	•	Angle grinder
Discs	•	4 1/2"
Voltage	•	127 V~
Frequency	•	60 Hz
Current	•	7 A
Power	•	1.2 Hp
Speed	•	11 000 r/min
Duty cycle	•	50 minutes work per 20 minutes idle. Maximum 6 hours per day.
Conductors	•	16 AWG x 2C with insulating temperature of 221 °F
Insulating	•	Class II IP Grade • IP 20

Power Cord Grips used in this product: Type Y
 Tool Build Quality: Reinforced insulation.
 Thermal insulation on motor winding: Class E

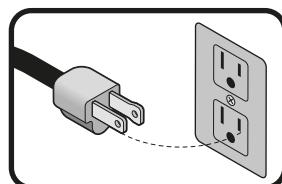

⚠ WARNING Avoid the risk of electric shock or severe injury. When the power cable gets damaged it should only be replaced by the manufacturer or at a TRUPER Authorized Service Center. The build quality of the electric insulation is altered if spills or liquid gets into the tool while in use. Do not expose to rain, liquids and/or dampness.

⚠ WARNING Before gaining access to the terminals all power sources should be disconnected.

Power Requirements

⚠ WARNING Tools with double insulation reinforced insulation are equipped with a polarized plug (one prong is wider than the other). This plug will only fit in the right way into a polarized outlet. If the plug cannot be introduced into the outlet, reverse the plug. If it still doesn't fit, call a qualified electrician to install for you a polarized outlet. Do not alter the plug in any way. Both insulation types eliminates the need of both a grounded third power cord with three prongs or a grounded power connection.

⚠ WARNING When using an extension cable, verify the gauge is enough for the power that your product needs. A lower gauge cable will cause voltage drop in the line, resulting in power loss and overheating. The following table shows the right size to use depending on cable's length and the ampere capability shown in the tool's nameplate. When in doubt use the next higher gauge.

Ampere Capacity	Number of Conductors	Extension gauge from 6' to 49'	higher than 49'
from 0 A and up to 10 A		18 AWG(*)	16 AWG
from 10 A and up to 13 A		16 AWG	14 AWG
from 13 A and up to 15 A	3 (one grounded)	14 AWG	12 AWG
from 15 A and up to 20 A		8 AWG	6 AWG

* It is safe to use only if the extensions have a built-in artifact for over current protection.

AWG = American Wire Gauge. Reference: NMX-J-195-ANCE

⚠ WARNING When operating power tools outdoors, use a VOLTECK grounded extension cable labeled "For Outdoors Use". These extensions are specially designed for operating outdoors and reduce the risk of electric shock.

⚠ WARNING! Read carefully all safety warnings and instructions listed below. Failure to comply with any of these warnings may result in electric shock, fire and / or severe damage. **Save all warnings and instructions for future references.**

Work area

Keep your work area clean, and well lit.

Cluttered and dark areas may cause accidents.

Never use the tool in explosive atmospheres, such as in the presence of flammable liquids, gases or dust.

Sparks generated by power tools may ignite the flammable material.

Keep children and bystanders at a safe distance while operating the tool.

Distractions may cause loss of control.

Electrical Safety

The tool plug must match the power outlet. Never modify the plug in any way. Do not use any adapter plugs with grounded power tools.

Modified plugs and different power outlets increase the risk of electric shock.

Avoid body contact with grounded surfaces, such as pipes, radiators, electric ranges and refrigerators.

The risk of electric shock increases if your body is grounded.

Do not expose the tool to rain or wet conditions.

Water entering into the tool increases the risk of electric shock.

Do not force the cord. Never use the cord to carry, lift or unplug the tool. Keep the cord away from heat, oil, sharp edges or moving parts.

Damaged or entangled cords increase the risk of electric shock.

When operating a tool outdoors, use an extension cord suitable for outdoor use.

Using an adequate outdoor extension cord reduces the risk of electric shock.

If operating the tool in a damp location cannot be avoided, use a ground fault circuit interrupter (GFCI) protected supply.

Using a GFCI reduces the risk of electric shock.

Personal safety

Stay alert, watch what you are doing and use common sense when operating a tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication.

A moment of distraction while operating the tool may result in personal injury.

Use personal protective equipment. Always wear eye protection.

Protective equipment such as safety glasses, anti-dust mask, non-skid shoes, hard hats and hearing protection used in the right conditions significantly reduce personal injury.

Prevent unintentional starting up. Ensure the switch is in the "OFF" position before connecting into the power source and / or battery as well as when carrying the tool.

Transporting power tools with the finger on the switch or connecting power tools with the switch in the "ON" position may cause accidents.

Remove any wrench or vice before turning the power tool on.

Wrenches or vices left attached to rotating parts of the tool may result in personal injury.

Do not overreach. Keep proper footing and balance at all times.

This enables a better control on the tool during unexpected situations.

Dress properly. Do not wear loose clothing or jewelry. Keep hair, clothes and gloves away from the moving parts.

Loose clothes or long hair may get caught in moving parts.

If you have dust extraction and collection devices connected onto the tool, inspect their connections and use them correctly.

Using these devices reduce dust-related risks.

Power Tools Use and Care

Do not force the tool. Use the adequate tool for your application.

The correct tool delivers a better and safer job at the rate for which it was designed.

Do not use the tool if the switch is not working properly.

Any power tool that cannot be turned ON or OFF is dangerous and should be repaired before operating.

Disconnect the tool from the power source and / or battery before making any adjustments, changing accessories or storing.

These measures reduce the risk of accidentally starting the tool.

Store tools out of the reach of children. Do not allow persons that are not familiar with the tool or its instructions to operate the tool.

Power tools are dangerous in the hands of untrained users.

Service the tool. Check the mobile parts are not misaligned or stuck. There should not be broken parts or other conditions that may affect its operation. Repair any damage before using the tool.

Most accidents are caused due to poor maintenance to the tools.

Keep the cutting accessories sharp and clean.

Cutting accessories in good working conditions are less likely to bind and are easier to control.

Use the tool, components and accessories in accordance with these instructions and the projected way to use it for the type of tool when in adequate working conditions.

Using the tool for applications different from those it was designed for, could result in a hazardous situation.

Service

Repair the tool in a TRUPER® Authorized Service Center using only identical spare parts.

This will ensure that the safety of the power tool is maintained.

This tool is in compliance with
the Official Mexican Standard
(NOM - Norma Oficial Mexicana).

Safety warnings for angle grinders

This power tool is intended to function as a cutting tool. Read all safety warnings, instructions and specifications provided.

Select the right disc

A CAUTION • Never use discs with bigger diameter than the size required in the tool.

A WARNING • Use only discs or accessories than 11 000 RPM speeds.

A CAUTION • Use only discs or accessories with an orifice that fits perfectly in the tool spindle.

A CAUTION • Use only discs or accessories specifically designed for the chosen material.

Keep present people at a safe distance from the work area. Anyone entering the work area should wear personal protective equipment.

Before operating the grinder

- Set apart some time and assess the job you are about to do. Pay attention to all the necessary cautions before starting to grind.

A DANGER • Remove all the fastening wrenches from the tool. Otherwise they can shoot away causing severe injuries to the user.

A WARNING • Double-check the guard. It should be perfectly fastened and in good working condition. Do not use the tool without a guard.

A CAUTION • Double-check the disc. It should not be broken or cracked. Tap the disc gently with a wooden hammer and listen for a strange sound to learn if it is cracked.

A DANGER • Before plugging the tool, see if it is in the OFF position. Otherwise the tool could start unexpectedly causing severe injuries.

A CAUTION • Run the tool 30 seconds before using, to detect important vibration or any type of unusual movement. If detected, unplug the tool and take it to a **TRUPER®** Authorized Service Center.

A CAUTION • See if the disc rotates freely.

- Do not tighten the disc. It could brake.

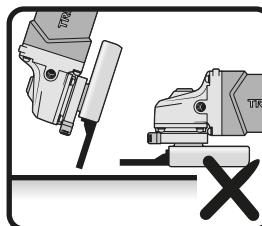

A WARNING • To work with small work pieces fasten with wrenches. Never use your hands to hold the piece.

While operating the grinder

A CAUTION • Do not start the tool when the disc is touching the work piece.

It is not recommended to use this power tool in operations such as sanding, brushing or polishing

Do not use accessories that are not specifically designed and recommended by the manufacturer.

Wrong way to operate the grinder

A WARNING • Wear safety glasses, gloves and an apron when using the tool.

A WARNING • Keep the power cable or extension in the back of the tool. Avoid accidentally damaging the cables with the disc.

- If control of the power tool is lost, the cable may be cut or tangled and the operator's arm or hand may be pulled toward the rotary attachment.

A WARNING • Never hold the tool by the power cable. Hold by the housing or auxiliary handle.

A CAUTION • Hold the tool by the isolated parts. The cutting tool could come into contact with hidden wiring or its own cable. Making contact with a "live" wire causes the metal parts to electrify and give an electric shock to the user.

- Never let go of the power tool until the attachment comes to a complete stop.

- Never hit the work surface with the disc.

A CAUTION • To get the best result with the grinding process, the inclination of the disc and the working surface should have an angle measuring 15° to 30°

A DANGER • When the disc is rotating never use the spindle lock to stop it. It is very dangerous and may cause injuries to the user.

A CAUTION • Do not touch the disc or the working piece after grinding. Wait for them to cool down. Never try to cool them down using water or oil.

A WARNING • Before checking, adjusting or changing discs, double-check the tool is not plugged in.

- Do not use the power tool near flammable materials.
- Do not operate the tool while it is being transported to your side.

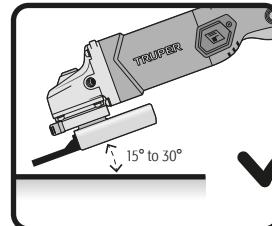

A DANGER • Sparks caused when grinding may be dangerous. Use caution. Make sure sparks do not get into contact with skin or flammable substances.

- Gradually clean the tool's vents. The motor fan directs dust into the housing and excessive accumulation of metal dust can cause an electrical hazard.

- Do not use accessories that require liquid refrigerants. The use of water or other liquid refrigerants can result in an electric shock.

Keep bystanders a safe distance from the work area.

Anyone in the work area should wear personal protective equipment.

Right way to operate the grinder

The outer diameter and thickness of the accessories must be within the assigned capacity. Incorrectly sized accessories cannot be properly protected or controlled.

For best results use 4 - 1/2 (115 mm) cutting discs with 1 mm - 6.4 mm thickness

⚠ DANGER KICKBACK (Sharp Recoil)

Kickback (sharp recoil) is a sudden reaction when a rotating wheel, backrest, brush, or other accessory gets stuck or snagged. Stalling or snagging causes rapid stalling of the rotary attachment which in turn causes the power tool to be forced uncontrollably in the direction opposite to the rotation of the attachment at the working point.

An abrasive disc jams into the workpiece, the edge of the contacting disc can be pinched into the surface of the material causing the disc to stop, creating a kickback (sudden recoil). The disc may break and the fragments may jump in the direction of or away from the operator, depending on the direction of disc movement at the point of jamming.

Kickback can occur as a result of misuse of power tools and/or improper operating procedures or conditions and can be avoided by taking the precautions listed below:

- a) **Keep a firm grip on the power tool. Maintain your body and arm so that they can resist the forces of kickback. Always use the auxiliary handle, if provided, for maximum control over kickback or the reaction of the torsional movement of the engine during starting.** The operator can control the torsional movement and the kickback forces if the appropriate precautions are taken;
- b) **Never place your hand near the rotating attachment.**

The accessories may kick back in your hand;

- c) **Do not place your body in the area where the power tool can move if kickback (sudden recoil) occurs.**

This will propel the power tool in the opposite direction of disc movement at the point of engagement or binding;

- d) **Take special care when working on corners, sharp edges, among others. Avoid bouncing and jamming of the attachment.**

When working corners, sharp edges, or bouncing, can cause the attachment to jam and result in loss of control of the power tool or kickback (sudden recoil) of the power tool.

⚠ WARNING Specific safety for grinding and cutting operations with abrasives

- a) **Use only disc types that are recommended for the specific power tool and the specific tool holder that is designed for the selected disc.**

Discs that are not designed for the power tool cannot be properly protected and are unsafe;

- b) **The grinding surface of discs with a sunken center must be installed below the plane of the guard.**

An improperly installed disc may project burrs outside the plane of the guard and cannot be properly protected;

- c) **The guard must be securely fastened to the power tool and positioned to provide maximum safety, so that the least amount of the blade is exposed to the operator.**

- d) **Discs should be used only for their recommended applications. For example: do not grind with the side of a cut-off wheel.**

Abrasive discs are used for perfect grinding. If lateral forces are applied, they can break;

- e) **Always use flanges in perfect condition, of the correct size according to the shape of the selected disk.**

A flange with the correct characteristics supports the disc, which reduces the possibility of disc rupture. The flanges for cut-off wheels can be different from the flanges for grinding wheels;

- f) **Do not use worn out disks from larger or higher capacity tools**

Disks that are designed for larger or higher capacity tools are not suitable for the increased speed that occurs in the operation of a smaller size or capacity tool and may defragment.

⚠ WARNING Additional safety warnings for abrasive cutting operations

- a) **Avoid locking or applying excessive pressure to the abrasive cut-off wheel. Do not attempt to make an excessively deep cut.**

Applying excessive force to the disc increases the load on the power tool and the susceptibility to deformation in the cutting area and increases the possibility of kickback (sudden recoil) or blade breakage;

- b) **Do not place your body in line and behind the rotating disc.**

When the disc, at the point of operation, is aligned with your body, the possibility of a kickback (sudden recoil) can propel the spinning disc and the power tool directly against you;

- c) **When disc operation is interrupted or cutting stops for any reason, turn off the power tool and keep it stationary until the disc comes to a complete stop. Do not attempt to remove the blade while it is in motion, as this may cause kickback (sudden recoil) or similar effect.**

Investigate and complete corrective actions to eliminate the cause of the spin interruption;

- d) **Do not restart the cutting operation on the workpiece. Allow the blade to reach maximum speed off the workpiece and carefully restart cutting.**

The abrasive cut-off disc can jam, move upwards or produce a kickback if cutting is restarted on the workpiece;

- e) **Support large workpieces on presses or clamping brackets to reduce the risk of the abrasive cut-off disc becoming trapped or of kickback (sudden recoil).**

Large pieces tend to sink under their own weight. Brackets should be placed under the workpiece near the cutting line and near the edge of the workpiece on both sides of the abrasive cut-off wheel;

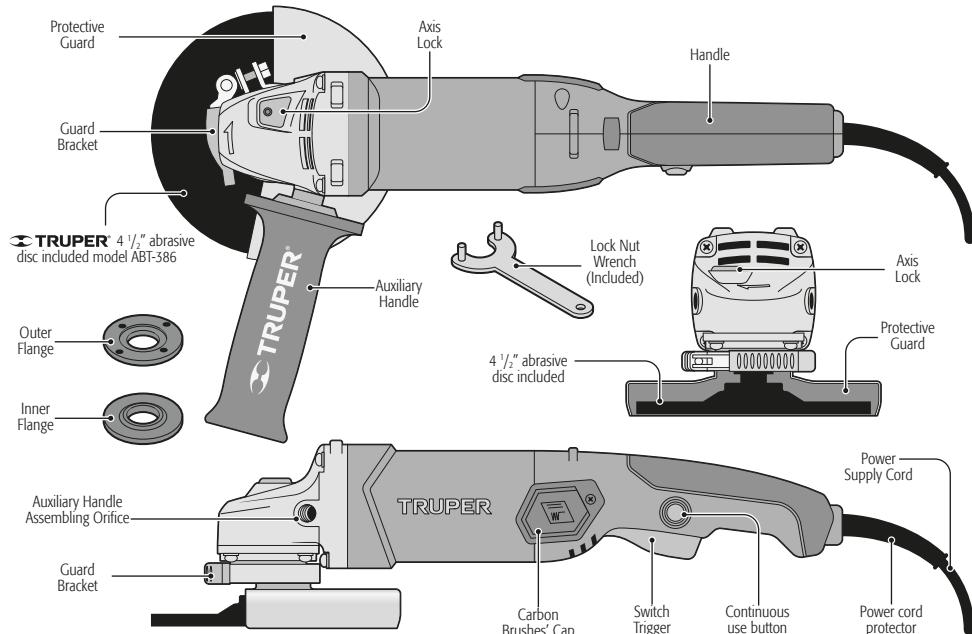

- f) **Be careful when making a "very small cut" in walls or other blind areas or where there is no visibility of internal components.**

The protruding abrasive cutting disc can cut through gas or water pipes, electrical wiring, or objects that may cause kickback (sudden recoil).

Do not use damaged accessories. Before each use inspect the accessories. After inspecting to install the accessory, operate the tool at maximum speed without load, for one minute. Damaged accessories generally break during this period of time.

Parts

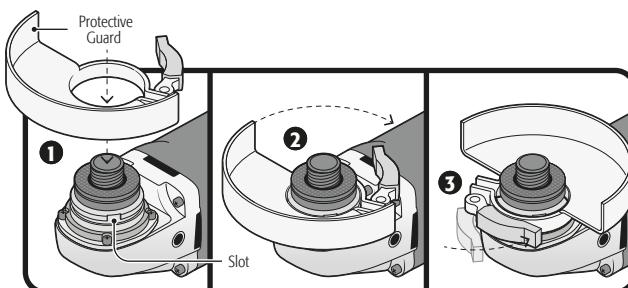

TRUPER®

Assembly

Protection Guard Assembly

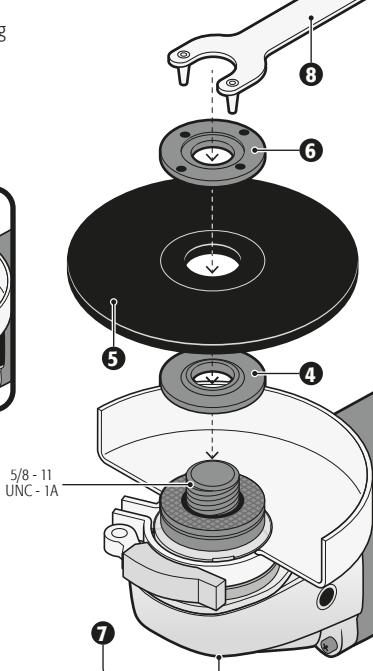

1. Match both cantilevered parts inside the guard bracket with the corresponding slots in the axis cover.
2. Turn 180° into the opposite position.
3. Fix pushing the bracket lever.

Disc Assembly

4. Fit the inner flange onto the spindle.
5. Set the disc onto the inner flange.
6. Set the outer flange onto the spindle.
7. Press the spindle lock into the grinder head.
8. Screw the outer flange with the lock nut wrench until securely fastened.

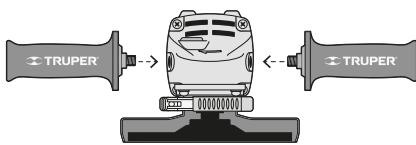

DANGER The spindle lock should only be used to change discs.
Never to stop the disc while rotating.

ENGLISH

Auxiliary Handle Assembly

- For a safer operation use the auxiliary handle. Fit it into any of the two mounting orifices. Use the one that make your job easier.

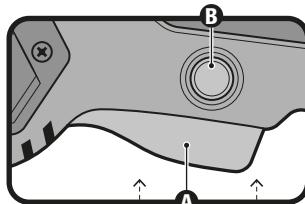

Start Up

The angle grinder is a manual power tool. It is used to grind and cut steel, pipes, and angles in iron, bricks, tiles, stone and/or ceramic pieces. Also to remove burr from metal surfaces, to level and smoothing out soldering. When changing the tool accessory, it can be used to clean rust and to buff metal surfaces and other materials.

Switch On

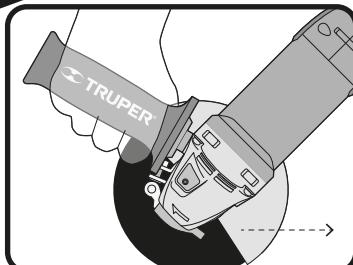

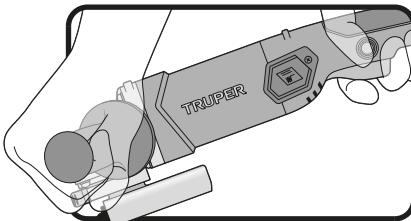

- Intermittent operation:**
Connect the plug into the power outlet.
Press switch **(A)** to start the tool.
To stop, just release the switch.
- Continuous operation:**
Connect the plug into the power outlet.
Press switch **(A)** and block it pressing the continuous use button **(B)**.
To stop, press and then release the switch.

How to correctly hold the tool

Always hold the tool using both hands. One hand holds the handle and the other hand on the auxiliary handle. Use care not to obstruct the ventilation slots.

- Grinding:**
For better results hold the tool at an angle of 15° to 30° with regards to the work piece. Move backward and forward with a constant rhythm and a slight pressure. This way the work piece will not get too hot, will not fade and rough edges will not appear.
- Cutting:**
Do not press, tilt or oscillate the tool. Use a moderate speed. The disc should always rotate in a movement opposite to the cutting movement. Never the other way around, as there is danger that the tool shoots out of control.
For cutting hard stone, using a diamond disc is recommended.

Useful Tips

- To prevent damaging the disc work using the disc into the right position.
 - Press onto the work piece using less force than the tool's weight to avoid overload and damaging the motor and disc.
 - After installing a new disc allow it to rotate with no load at least during one minute. If it vibrates, replace immediately.
- ⚠ CAUTION** • Avoid working onto wood or soft materials like lead. These materials saturate the disc very fast and make it unusable.

Maintenance

- Always disconnect the tool before cleaning.
- Never use water or other liquids. Use only a brush.
- To prevent the motor to overheat clean the ventilation slots regularly.
- Check all the tool components are perfectly fixed.
- The housing should not be cracked or damaged.
- Double-check the power cable is not cut or peeled.
- After a prolonged use the grease on the tool head should be replaced in a

 **TRUPER**® Authorized Service Center.

Repairs

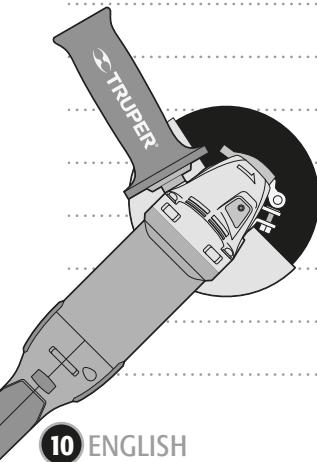

Use only spare parts and accessories recommended by the manufacturer. In the event the tool is not working, repairs should be performed in a
 **TRUPER**® Authorized Service Center

Carbon brush replacement

- Replace worn (burnt, broken or smaller than 0.19" long) carbon brushes. Use new carbons.
- When changing carbons always change both carbons at the same time.
- Remove worn carbons from the housing. Clean dust with compressed air.
- Set the new carbons in a reverse order. Carbon should easily fall into the carbon housing.
- After setting up new carbon brushes let the grinder to run a couple of minutes with no load. This way the carbon brushes will adjust better.
- Use only original  **TRUPER**® spare carbon brushes, designed specifically with the right strength and electric resistance for each type of motor. Carbon brushes with different specifications may damage the motor.
- For better results, it is recommended to use grinding and/or cutting disc to 4-1/2"  **TRUPER**®

Storage

Neatly store the tool in a dry place and protected from dust and water .

Authorized Service Centers

In the event of any problem contacting a Truper Authorized Service Center, please see our webpage www.truper.com to get an updated list, or call our toll-free numbers **800 690-6990** or **800 0187-8737** to get information about the nearest Service Center.

Notas

Almacenar la herramienta ordenadamente en un lugar seco y protegida de polvo y agua

Almacenamiento

- Para mayor rendimiento, es recomendado utilizar discos de corte y/o desbastar el motor.
- Siempre usar carbonos de repuesto **TRUPER®** originales, ya que los carbonos para cada tipo de motor. Los carbonos fueran de especificaciones puden dañar el motor.
- Solo se deben usar carbonos de repuesto **TRUPER®** originales, teniendo un mejor ajuste.
- Después de cortar los carbonos nuevos, permitir que la serradora funcione durante algunos minutos sin cargar de trabajo para que los carbonos se adapten al motor.
- Coloque los carbonos nuevos invertido el orden. Los carbonos deben caer en los portacarbonos fácilmente.
- Recorte los carbonos con una compuerta.
- Es necesario desgastados del portacarbonos y retirar el polvo carbonos.
- Cada uno se hace el cambio de carbonos siempre deban cambiarse los dos menos de 5 mm de largo), con carbonos nuevos.
- Es necesario desgastados (quemados), rotos o de acumulación con aire comprimido.
- Recorte los carbonos desgastados del portacarbonos y retirar el polvo carbonos.

Cambio de carbonos

Utilice únicamente reacciones y accesorios recomendados por el fabricante. En caso de que la herramienta no funcione la preparación deberá ser realizada por algún Centro de Servicio Autorizado **TRUPER®**.

Preparación

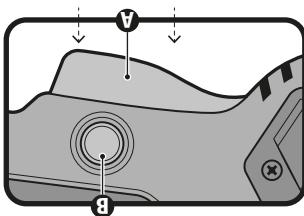

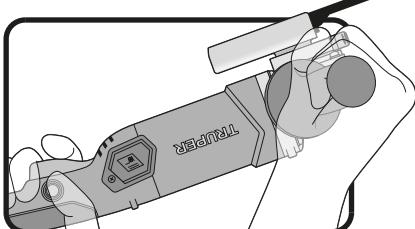

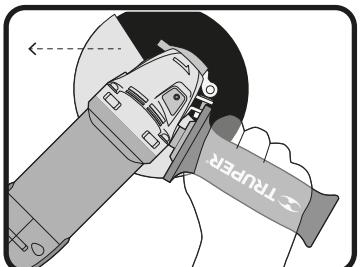

- Debe cambiarla en un Centro de Servicio Autorizado **TRUPER®**.
- Despues de uso solo prolongado la grasa de la cebolla de la herramienta debe revisar que no esté corroído o pedado.
- La cebolla no debe estar curvada o dañada.
- Revise todos los componentes de la herramienta están bien firmos.
- Para evitar que se sobrecaliente el motor, debe limpiar las ranuras de ventilación de manera regular.
- Nunca utilice agua u otros líquidos, solamente utilizar un cepillo.
- Descarte siempre la herramienta antes de proceder a limpiarla.

Mantenimiento

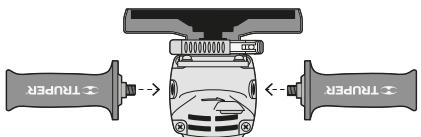

• Evite trabajar madera o metales suaves como el plomo. Pueden ser materiales saturan muy rápido el disco y lo hacen inutilizable.

- Evite trabajar madera o metales suaves como el plomo. Pueden ser materiales saturan muy rápido el disco y lo hacen inutilizable.
- Despues de instalar un disco nuevo permítale que el disco gire sin trabaja al menos un minuto.
- Puede sobreearga darse el motor y el disco.
- Presione sobre la pieza de trabajo con una fuerza menor al peso de la herramienta para evitar que la herramienta se dañe.
- Trabaje con el disco en la posición correcta para evitar que se dañe.

Consejos útiles

Puesta en marcha

TRUPER®

Montaje del mango auxiliar

- Para una operación segura utilice el mango auxiliar, coloquelo en el lugar de los orificios para montarlo que le facilite más el trabajo.

- Opréndalo firmemente: Conecte la clavija al tomacorriente. Presione el interruptor (A) para hacer que la herramienta empiece a funcionar. Para interrumpir su uso, simplemente suelte el interruptor.

- Opréndalo continuamente: Presione el interruptor (A) y bloquelo, apretando el conector la clavija al tomacorriente. Suelte el interruptor suelto cuando se detenga la herramienta.

- Siempre sostenga la herramienta con ambas manos. Una mano sostiene el mango y la otra el mango auxiliar. Tenga cuidado de no obstruir las ranuras de ventilación.

- Esmeralda: Para un mejor resultado sostenga la herramienta a 15° con respecto a la pieza de trabajo. Haga movimientos de adelante hacia atrás con una ligera presión a un ritmo constante. De esta forma la pieza de trabajo no se calienta demasiado, no se descolará y no se dañará.

- Corte: Vuelocidad moderada. Para cortar piedras duras recomienda usar un herramienta soga despedida sin control. E disco debe girar siempre en sentido opuesto al movimiento de corte, nunca en el otro sentido, pues existe el riesgo de que la herramienta se desgaste la herramienta. Trabaje a una velocidad moderada.

- Punto de corte de diamante. Para cortar piedras duras recomienda usar un disco de diamante.

Como sujetar adecuadamente la herramienta

- La esmeriladora angular es una herramienta eléctrica manual, se utiliza para esmerilar cortar acero, tubos, hierro en ángulo, ladillo, azulejos, piedra y/o piezas de cerámica, para quitar la rebaba de las superficies de metal, para limpiar oxido y para pulir superficies de metal y otros materiales.

- Opréndalo firmemente: Conecte la clavija al tomacorriente. Presione el interruptor (A) para hacer que la herramienta empiece a funcionar. Para interrumpir su uso, simplemente suelte el interruptor.

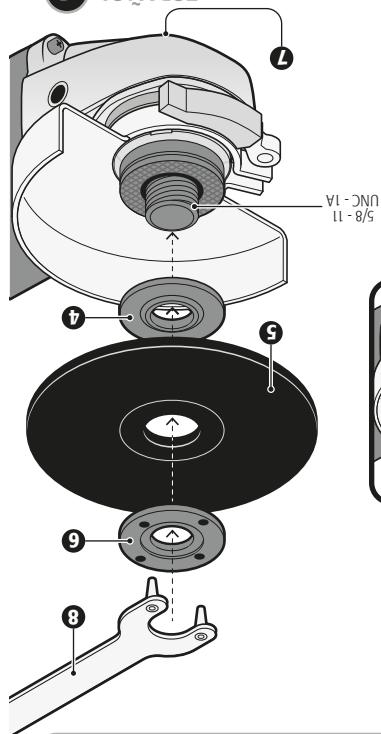

- Opréndalo continuamente: Presione el interruptor (A) y bloquelo, apretando el conector la clavija al tomacorriente. Suelte el interruptor suelto cuando se detenga la herramienta.

- Siempre sostenga la herramienta con ambas manos. Una mano sostiene el mango y la otra el mango auxiliar. Tenga cuidado de no obstruir las ranuras de ventilación.

- Esmeralda: Para un mejor resultado sostenga la herramienta a 15° con respecto a la pieza de trabajo. Haga movimientos de adelante hacia atrás con una ligera presión a un ritmo constante. De esta forma la pieza de trabajo no se calienta demasiado, no se descolará y no se dañará.

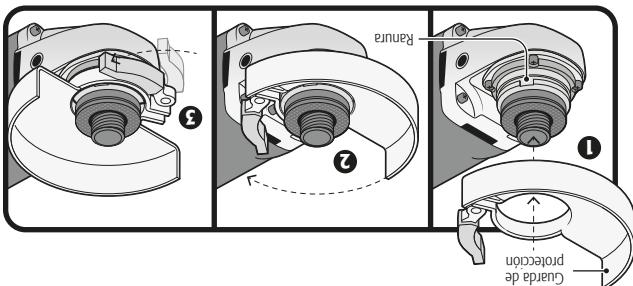

- Corte: Vuelocidad moderada. Para cortar piedras duras recomienda usar un herramienta soga despedida sin control. E disco debe girar siempre en sentido opuesto al movimiento de corte, nunca en el otro sentido, pues existe el riesgo de que la herramienta se desgaste la herramienta. Trabaje a una velocidad moderada.

- Punto de corte de diamante. Para cortar piedras duras recomienda usar un disco de diamante.

7. Presione la brida exterior con la llave de dos puntas hasta que quede bien fija.
8. Automilie la brida exterior con la llave de dos puntas hasta que quede bien fija.
5. Coloque el disco en la brida interior.
4. Fije la brida interior en el eje.
6. Coloque la brida exterior en el eje.
7. Automilie la brida exterior en el eje.
8. Automilie la brida exterior con la llave de dos puntas hasta que quede bien fija.

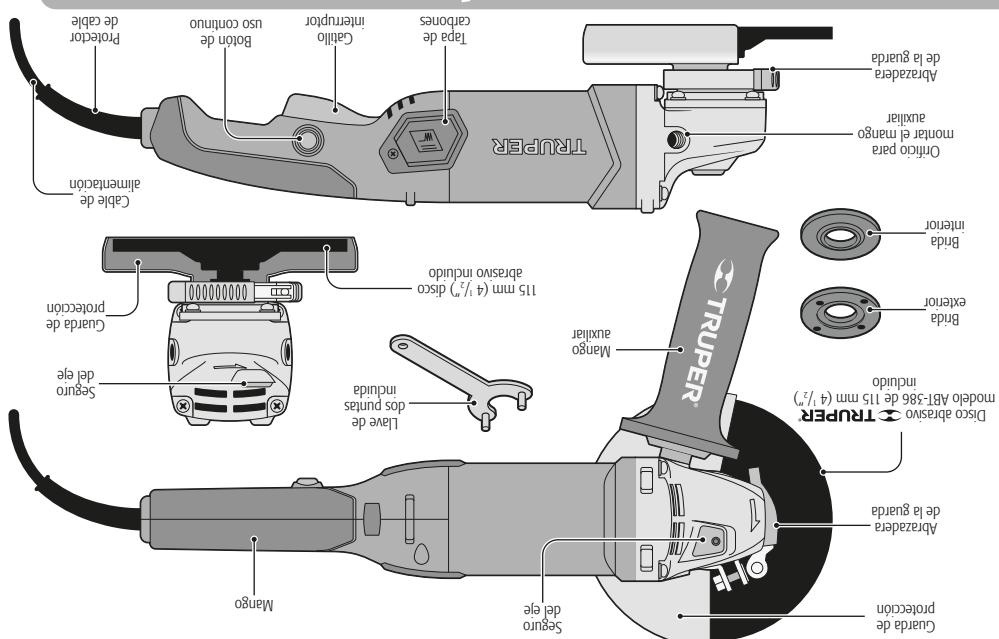

Montaje del disco

1. Haga coincidir las partes sobresalientes del interior de la abrazadera de la guarda de protección con las ranuras correspondientes del eje.
2. Girela 180° a la posición opuesta.
3. Fije la abrazadera de tornillo de la abrazadera.

Montaje de la guarda de protección

Montaje

ADVERTENCIA Al operar herramientas eléctricas en exteriores, utilice una extensión especializada para el uso en exteriores y reduzca el riesgo de sufrir una descarga eléctrica.

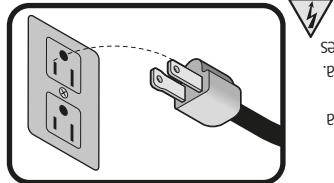

* Se permite utilizar siempre cables de alambre estandarizado con un aislamiento similar que cumple con la norma NMX-J-195-ANC-E.

de 0 hasta 10 A	18 AWG(*)	Calibre de extensión	Número de conductores	Amperes
de 10 hasta 13 A	16 AWG	16 AWG	3 (uno a tierra)	18 AWG
de 13 hasta 15 A	16 AWG	16 AWG	16 AWG	16 AWG
de 15 hasta 20 A	14 AWG	14 AWG	12 AWG	12 AWG
de 18 hasta 20 A	12 AWG	12 AWG	10 AWG	10 AWG

Predilecta de potencia y sobrecalefacción del motor. La siguiente tabla muestra el tamaño correcto que debe usarse dependiendo de la longitud del cable y de la capacidad de amperes indicada en la placa de datos del herramienta. Si tiene

consumo fu de herramienta. Un cable de un calibre inferior ocasionaría cables de tensión en la línea, teniendo como resultado una pérdida de potencia y sobrecalefacción del motor. La siguiente tabla muestra el tamaño correcto que debe usarse

dependiendo de la longitud del cable más alto.

Al usar un cable de extensión, asegúrese de usar el calibre suficiente para transportar la corriente que con conexión a tierra o en sistema de conexión eléctrica con conexión a tierra.

Algunos tipos de sistema eliminan la necesidad de usar cables de conexión entre las partes de los equipos con conexión a tierra. No use la clavija en forma alguna. Estas unidades tienen una conexión a tierra separada y sólo puede conectarse de una forma. Si la clavija no cabe en el enchufe, volteela. Si aún así no cabe, póngase en contacto con un electricista calificado o llame a su proveedor. Si la clavija no cabe en el enchufe, volteela. Si aún así no cabe, póngase en contacto con un electricista calificado o llame a su proveedor. Esta es una medida de seguridad para evitar daños a la herramienta.

Reductores eléctricos

ADVERTENCIA Antes de obtener acceso a las terminales, todos los circuitos de alimentación deben ser desconectados.

La construcción de los dispositivos de protección de este tipo de dispositivo es altamente peligrosa. No lo exponga a la lluvia, liquidos y/o humedad.

Automizado **TRUPER**, con el fin de evitar algún riesgo de electrocución de esta herramienta es necesario por separado de la conexión de alimentación se doble aislar tanto el cable de alimentación y el cable de conexión de tierra. Esto es una medida de seguridad para evitar daños a la herramienta.

Si el cable de alimentación se daña, este debe ser reemplazado por el fabricante o Centro de Servicio.

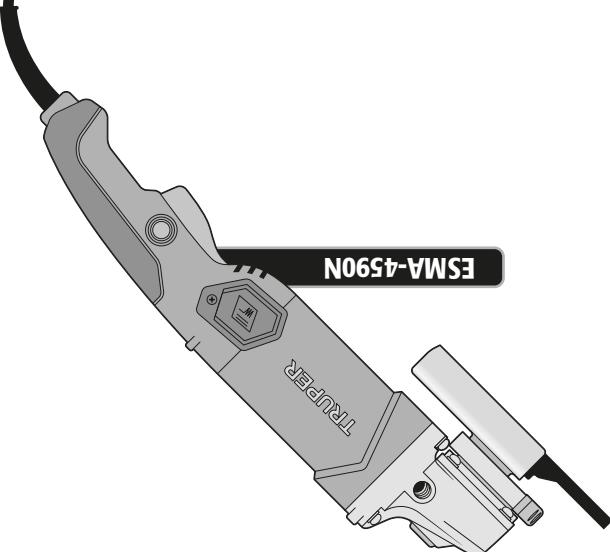

La clase de aislamiento térmico de los devanados del motor: Clase E
La clase de construcción térmica es: Aislamiento reforzado.
El cable de alimentación tiene sujetacables tipo Y.
